

NHS HOW TO USE

Official How to Use document

In this document, you will cover the following:

1. How to access your Staff Panel
2. How to Check-In a patient
3. How to access a designated patients page
4. How to properly change the Available Beds, and the Wait Time

How to access your Staff Panel

To access your Staff Panel you are going to want to head to this URL:

<https://princegeorgesuniversityhospital.netlify.app/staff>

It will then ask you for the following details:

Username

Password

You should have received these via your eMail when you requested an account creation. Once logged in you should see the Staff Panel.

How to Check-In a Patient

In the Staff Panel, at the bottom you will see the following fields:

ROBLOX NAME

Date of Birth

Patient ID

NIL BY MOUTH (Y/N)

Presenting Complaint

By filling all of these details out, you have efficiently created a patient datastore for them. You will then choose one of the following Priorities depending on their presenting complaint.

0 - Minor Care

1 - Lower Medium

2 - Higher Medium

3 - Critical Care

4 - Deceased

Once you have selected your priority, you will then click “Create Patient” underneath the priority. You will then see it appear in a table with the ID clickable.

How to access a patient's designated data

To access a patient's designated data, you will want to click the highlighted blue Patient ID next to the patient's priority you want to view. Once clicked it will take you to a separate page where you can view the Patients details such as priority, presenting complaint, age, roblox name.

Underneath that you will see Medical History which is filled out when you add Clinical Information etc underneath. This is used for Triage, Care Team details, Latest Observations, Other Details, and Discharge Logs.

Once you have finalised them details, you would scroll to the bottom and click the blue button stating “Save Clinical Info”

How to change Bed Availability and Wait Time

On the Staff Dashboard at the top of your screen you should see the following Fields:

Wait time (mins)

Beds available

Total Beds

With these, you can change the hospital's data to how many beds are available and the total beds in the hospital. Alongside the wait time on how long it will take patients to get seen in-game.

To change these, you will click the button that states "Edit Hospital Data" you will then click the field you want to edit which can be Beds Available, or the Wait time. And change the number. Once changed, you will click Save in the bottom right. And then you should see the numbers at the top change, with the Last Updated to change to the current Date and Time of it being updated.

Conclusion

In conclusion to this document for Prince George's University Hospital's official Hospital and Patient Management System, you can now efficiently and effectively use this system to your full ability within PGUH to check-in patients, to provide quality care. And to ensure all data is logged with due diligence.

Kind Regards,
Charlie Hughes,
Contractor,
Prince George University Hospital
